DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Miyashita et al., U.S. Patent # 6,437,649 B2.

Figs. 1 and 3B of Miyashita et al. disclose a circuit comprising: an input signal preservation unit (11 in Fig. 1) that is connected with an input terminal of an amplification device (Qd) of an amplification circuit capable of amplifying an AC input signal (In) using a certain amplification device (Qd) and outputting the same and increases an input resistance value with respect to the input signal and prevents an attenuation of the input signal; and an output signal preservation unit (12) that is connected with an output terminal (Out) of the amplification device and increases an output resistance value with respect to the amplification signal and prevents an attenuation of the amplification output signal (signal at collector of Qd) for thereby compensating a voltage variation ratio with respect to the amplification output signal.

Regarding claim 2, wherein said input signal preservation unit includes: a bias resistor R4 of Fig. 3B) connected in parallel with an input terminal of the amplification device (Qd); and a reactor (variable inductor of Fig. 3B) that is connected in series with

Art Unit: 2817

the bias resistor and operates as an AC resistor and increases an input resistance value together with the bias resistor for thereby preventing a leakage of the AC input signal.

Allowable Subject Matter

Claims 3 and 4 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. U.S. Patents # 4,875,019, # 5,742,205, # 6,313,706 B1, # 6,628,176 B1, # 6,963,247 B2, and # 7,084,707 B2 contain some limitations of the claimed invention.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Patricia T. Nguyen whose telephone number is (571) 272-1768. The examiner can normally be reached on 6:30 AM - 5:00 PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Robert Pascal can be reached on 571-272-1769. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a

USPTO Customer Service Representative or access to the automated information

system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
